Geostone®

Beautifully coloured. Powerfully enduring.

Geostone's coloured concrete range brings together the strength of concrete and the vibrancy of colour — creating a surface that's as durable as it is beautiful. Formulated with high-performance pigments that are weather resistant, UV light stable and alkali stable, this range is made for lasting performance in Australian conditions.

Coloured Concrete

Geostone's coloured concrete can be finished in a range of styles to suit any project — from smooth and polished to textured or natural. Each finish brings out the colour in a unique way, creating tones that range from soft and subtle to rich and bold. Whatever the look, the result is always timeless, durable and distinctly Geostone.

Geostone is backed by Holcim – the global leader in sustainable construction.

We are a leading supplier of decorative concrete in Australia and part of the Holcim group — a global leader in building solutions. With a network of over 160 concrete plants and more than 40 quarries located throughout Australia, Geostone provides the stability and certainty needed to get the job done.

Create inspiring areas with coloured concrete.

Our coloured concrete products have been designed to assist homeowners, architects, designers and builders in creating functional and beautiful spaces. There is an extensive range of colour options available from earthy, warm summer tones to understated cool colours or even a bold statement black. Geostone has the perfect colour to complement your design vision.

Light and Solar Reflectance.

The colour you choose can influence both the comfort and sustainability of your space. Each colour interacts with natural light differently. Darker colours offer a rich, intense finish but absorb more sunlight and heat, creating a warmer surface. Lighter shades reflect more light and help keep surfaces cooler under the sun. You can find detailed technical data and product specifications on our website to help you make the right design choices.

Disclaimer: The product samples displayed in this brochure are indicative only of the finished product and no guarantee of the coloured or textured finish is given or implied. Colour and texture can vary due to many factors, including reproductive differences between photographs in brochures, samples and displays and the actual product. Variations can also occur due to the consistency, appearance, quality and texture of natural ingredients, colour additives, and water content, as well as from handling, placement and finishing techniques. Site conditions, weather, curing practices and subsequent efflorescence may further influence the final appearance. If colour selection is critical to your project, we strongly recommend that your contractor produces a site sample using all intended raw materials, finishing and curing techniques.
